

Bright Roof Vs Alternatives

Three ways an apartment society can go solar.

Option	Upfront cost	Ownership	Maintenance	Best for
Society buys the system	Paid by society/residents	Society	Society manages	Societies comfortable collecting capex and managing the system
Payback-and-handover model	Usually low or nil depending on model	May transfer later	May shift to society	Societies that want eventual ownership
Bright Roof model	Nil for society	Bright Roof	Bright Roof handles it	Societies that want savings without upfront collection or maintenance burden

Simple Decision

Choose society-owned solar if residents want to fund and manage the system. Choose Bright Roof if the society wants lower electricity cost without upfront installation payment and without taking over long-term system maintenance.
